

## **MVP**

### **Features:**

- Graphics to show food items
- Add to cart buttons
- Estimated delivery times
- Order tracking
- Checkout options
- GPS to be able to locate the customer and track drivers
- Some sort of communications network so that drivers can get orders and customers can be kept up-to-date on their order status
- Prices on items

### **User Stories:**

- As a customer, I want to track my order, so I can plan my lunch accordingly.
- As a delivery driver, I want to be able to see information regarding an order, so that I can pick up the correct order and deliver it to the right customer.
- As a restaurant, I want to be able to accurately portray my menu items, so that customers know what we serve.
- As a customer, I want to be able to see prices and delivery times, so that I can know how much money I am spending and how long it may take for my order to arrive.
